1911

General Summary of the Year

The year 1911 was a year of significant progress in the field of research. The following table summarizes the key findings and achievements of the year.

Area of Research	Key Findings and Achievements
Physics	Discovery of the photoelectric effect, leading to the development of quantum mechanics.
Chemistry	Discovery of the structure of the benzene ring, leading to the development of organic chemistry.
Biology	Discovery of the structure of DNA, leading to the development of molecular biology.
Medicine	Discovery of the structure of the cell, leading to the development of cellular biology.
Astronomy	Discovery of the structure of the universe, leading to the development of cosmology.
